Hi! I never did get to finish project 2 - received 15/34 on it in the end. I was ready to attempt many things yesterday that had not worked on my first attempt (SQL injections, the cart session key, XSS attack, logging in as admin, etc) but I could not get the VM to come up and receive a DHCP address last night for some reason I do not yet understand since it worked fine when I did the same thing on Friday! So I handed in what I had that did work, but now that time is up and there is no worry of violating any honor code in helping me, I went back over my lecture notes and did some searching around, and was wondering if I could now ask some more specific questions to learn from what I got incorrect on project 2. Once I hear a response here, I'll post more specific questions, so let me know if someone out there is willing! Thanks.

Hi, The time is not up yet.

If you still have tries left and you want to try more things to get better score you still can.

1. Go on weekly quizzes down on the left.
2. Go to week 3.

3. Click apply late days found next to due date for BadStore Quiz and fill in the days you need to extend the due date from the original.
4. Do the quiz before the new due date.

Have in mind that you have a sum of 4 days to use. So if for example you use 3 days for this. You have only 1 day left for any other due date you might need to extend on this course.

You might be able to find more info if you search for "apply late days" via the search box on the top left.
I hope you'll be able to get a better grade.
Good luck.

I guess that is more appropriate to ask the questions after the Hard deadline.

Best Regards

That's an idea if I can get my VM to work later - however - my grade won't really improve - because I got a 15, and if I apply late days, at best, you can get 50% (which would be a 17/34, correct?) So we'll see how it goes, if I have more time to bring up the VM that really should have come up yesterday but did not. If I don't after the late days are over with and there is no worry of spoiling the answers discussed, at that time perhaps I will discuss the answers online with someone more specifically. I really don't care so much about improving my grade from 15 to 17, but I care more about learning from either what I did not get correct, or what I never got to attempt again due to the VM not coming up. Thanks.

No, with late days, you extend due dates and you can still get effective score 100%, that means 34, at least that was the case at the usable security course of this specialization. And i think it is the same here.

If you do the test without using late days then you ll take 50%.

That is something I did not know. Let me check that out. Thank you.

Great - I extended my due date until Fri. 11/28 at 8am EST - so that was helpful information- thank you. Now I have to borrow my son's lap top (where I got the VM to work) and try to get it to work again so I can re-attempt those questions I never got correct the first time I tried when the VM was working last week. For some reason, it just would not find a DHCP address yesterday when I booted it. So it's worth a try. Thanks for telling me about that.
